The closest prior art (DE-A-197 45 149) has been extensively described by the applicant on page 2 of the introductory part of the description and corresponds to the preamble of Claim 1.

**Problem:** To provide a closure system for motor vehicle doors in which the emitting/receiving unit can be arranged in the handle with little structural outlay.

**Solution:** The problem is solved by the characterising features of Claim 1, whereby the switching element is integrated in a container, the container is inserted into a cavity of the base shell of the handle and the base shell of the handle has in the area of the cavity a window-like recess in its external wall.

The searched prior art does not contain any indication of this design of the known closure system.

The subject matter of Claim 1 meets all the requirements of PCT Article 33(2), (3) and (4).

**Dependent Claims** 2-18 represent advantageous developments and structural details of the subject matter of Claim 1. The subject matter of these claims meets the requirements of PCT Rule 6.4.
